

About

EarthSearch Communications offers 10 years of service to fleet and asset managers around the globe. Our product and software deliver the most innovative applications to help solve some of the most complex logistic problems that businesses face daily. We created the worlds first wireless communication between RFID and GPS to provide continuous visibiity of cargo in transit and service order performance. Our electronic seals monitor containers, oil tankers and other cargo across the globe while expanding and increasing solution to small businesses and fleet owners around the globe.

HALO

Halo is a business fleet management device, which allows businesses to efficiently manage fleets and mobile assets. By using our proprietary Global Asset Tracking and Identification System (GATIS), businesses can efficiently dispatch service orders, monitor driving behavior, improve customer service and reduce cost of operation.

CAT

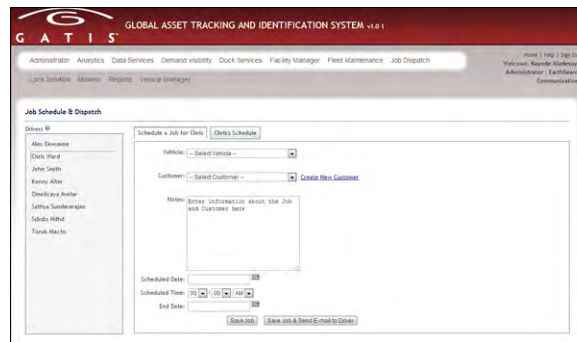

Covert Asset Tracking (CAT) is designed for businesses with needs to covertly track and monitor vehicles or assets in transit. CAT offers a smart and intelligent power management feature and rechargeable battery with a 5 year lifetime. CAT offers all of the features and benefits of HALO and offers optional RFID integration for proximity monitoring. CAT also uses our proprietary GATIS application.

Why Fleet Solution?

Improve employee performance

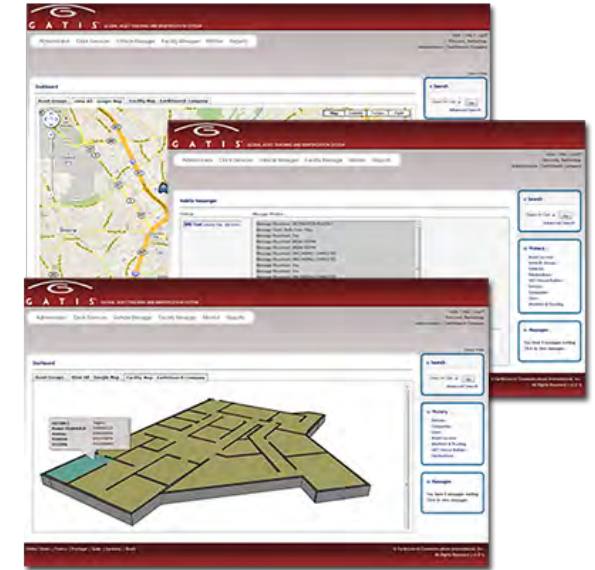

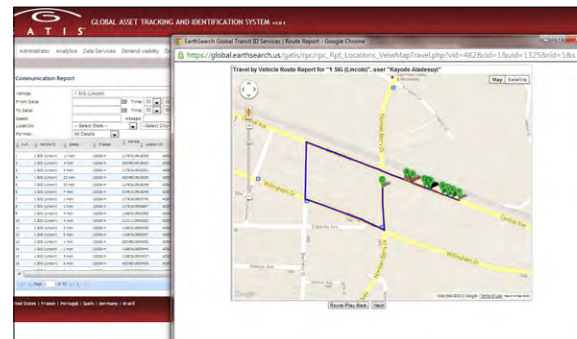

Fleet solution and other sensor technology can help improve employee performance by:

- Increasing number of service calls or jobs
- Better routing leads to more jobs performed
- Ensuring safer driving to reduce risk to a company
- Improve customer satisfaction

Reduce cost of operations

- Monitor idle time to save gas expense
- Select better routes for more efficient gas mileage
- Protect against unauthorized use of fleet
- View route traveled by driver

GATIS

Global Asset Tracking and Identification system (GATIS – SAP Certified) is a proprietary web based application that provides access to your fleet anywhere internet is available. Allows fleet operators full access and control over information related to fleets in the field. Offers easy configurable menu, such as electronic fence, cargo/job destination, speed monitoring. GATIS offers a robust platform with customizable application including data encryption.

Increase revenue

Efficient routing, job dispatching and less time between jobs will increase revenue.
